

# Perfect solutions for diverse gripping tasks

# FESTO

Dynamic Display  
D-GR2302

Different applications and products constantly place new demands on the gripper technology used. Festo already offers a wide portfolio of grippers and vacuum technology and is constantly developing it further. The adaptive grippers can be used for gripping a wide range of products and product packaging. They are ideal for picking up light, irregularly shaped and delicate goods.

Adaptive grippers as a customised solution grip sensitive goods with different geometries positively and gently.

The adaptive moulded gripper DHEF has an adaptable moulded gripper cap. With this, DHEF can grip a different, new geometry with every gripping process - without interrupting the work process!

Technical information about the Festo products used in this display can be obtained from the information counter at our exhibition stand or from our information service in Esslingen.
